System Overview:

The current system, Fraxion, is used for managing the purchase process, starting with purchase requests (PR) through purchase orders (PO).

Also Handling of Contracts

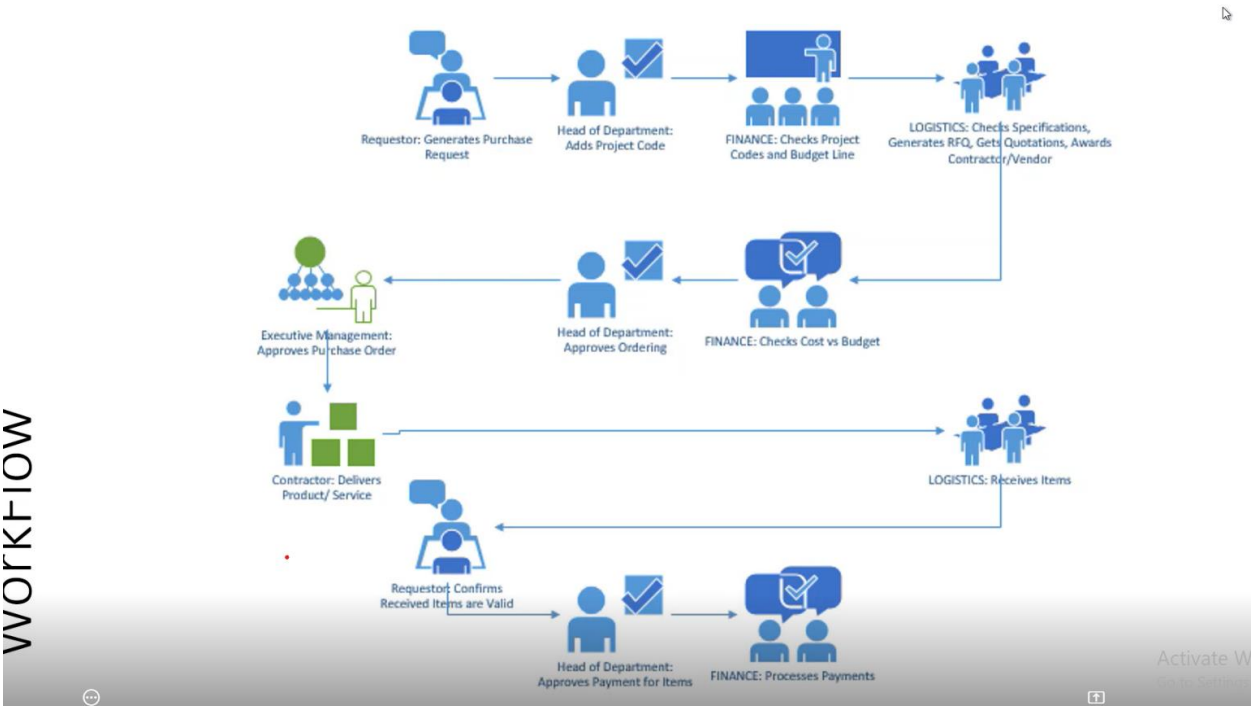

Key Processes:

1. **Purchase Request (PR) Generation:**
    - A user creates a purchase request (PR) within the system.
    - At this stage, the user selects a vendor; however, if the vendor is not yet known or confirmed, a default vendor option can be selected.
    - The user has the ability to attach relevant documents to the request and submits it for **pre-approval**.
    - The request is reviewed by the head of department, who adds the necessary General Ledger (G/L) and budget codes.
    - Once this is done, the request is forwarded to the finance team.
2. **Finance Verification:**
    - The finance team verifies that:
        - The G/L account is valid.
        - The project details are correct.
        - The budget line exists and has available funds.
    - Once the PR is validated, it moves to the quoting stage.
3. **Quoting and Procurement:**
    - The procurement process starts at this stage.
    - The supplier and logistics team handle the following tasks:
        - Reviewing the specifications.
        - Obtaining quotations in line with the procurement policy.
        - Awarding contracts based on the quotations received.

4. **Budget Check:**
    - After the procurement team has been awarded the contract, another member of the **finance team** checks the total costs against the budget.
    - Currently, this is a manual process done using Excel.

5. **Approval and Purchase Order (PO) Creation:**
    - The head of department reviews the costs and ensures that everything is within the budget.
    - The head of procurement checks the currency codes and ensures all due diligence is completed.
    - After these checks, a purchase order (PO) is created.
6. **Purchase Order Submission:**
    - The PO is sent to the supplier, typically in PDF form, along with all necessary approvals attached to show how the PO was approved.
7. **Receiving Goods:**
    - Once the goods or services are delivered, the requester confirms receipt of valid items in the system (Fraxion).
8. **Payment Process in Business Central (NAV):**
    - After confirmation of receipt, the process moves to Business Central (NAV) for the finance team to handle the payment.

WORKFLOW

Requestor: Generates Purchase Request
Head of Department: Adds Project Code
FINANCE: Checks Project Codes and Budget Line
LOGISTICS: Checks Specifications, Generates RFQ, Gets Quotations, Awards Contractor/Vendor
FINANCE: Checks Cost vs Budget
Head of Department: Approves Ordering
Executive Management: Approves Purchase Order
Contractor: Delivers Product/ Service
LOGISTICS: Receives Items
Requestor: Confirms Received Items are Valid
Head of Department: Approves Payment for Items
FINANCE: Processes Payments
